

Data Loss Prevention (DLP)

is a strategy for making sure that end users do not send sensitive or critical information outside the corporate network.

We've created a completely customizable Data Loss Prevention feature to be used by Group Admins within MyRepChat. With this new feature, you can create key words, phrases, or number combinations that may represent data that you feel is sensitive and/or critical. You can either: 1) flag the content for review and let it send, 2) flag and hold the content until it has been reviewed and cleared to send, or 3) reject the content with an explanation to the sender as to why it was rejected.

Pre-Review of a text message has been almost impossible up until this point. With our new DLP feature, it is now possible!

Data Loss Prevention Example:
